

## Evaluating the **AD5767** 16-Channel, 12-Bit Serial Input, Voltage Output DAC

### FEATURES

**Full featured evaluation board for the **AD5767** with the **ADP5071** power solution**  
**PC control in conjunction with the Analog Devices, Inc., **EVAL-SDP-CB1Z** system demonstration platform (SDP)**  
**Power solution generated from a single 3.3 V supply**  
**PC software for control using analysis/control/evaluation (ACE) software**

### GENERAL DESCRIPTION

The **EVAL-AD5767SD2Z** is a fully featured evaluation board that allows the user to easily evaluate all the features of the **AD5767** 16-channel, 12-bit, voltage output digital-to-analog converter (DAC).

This board also integrates a power solution using the **ADP5071** switching regulator to generate a bipolar supply of +8 V and -22 V from a +3.3 V input, allowing a DAC voltage output range of -20 V to +6 V. Alternatively, supplying the DAC with a linear power supply via the on-board connector (J9) achieves all ranges.

The **AD5767** can be controlled using the on-board connector (J10) or the **EVAL-SDP-CB1Z** SDP board (via J1). The SDP allows the evaluation board to be controlled through the USB

port of a Windows®-based PC using the **AD5767** evaluation software.

The **AD5767** is a 16-channel, 12-bit voltage output denseDAC®. The DAC generates output ranges from a 2.5 V reference. The **AD5767** also integrates output buffers allowing the device to source or sink up to 20 mA. The range is software selectable, and any channel can be routed to the monitor pin for external monitoring. The integration of the reference and output buffers allows an easy to use universal solution.

The device requires four power supplies.  $AV_{DD}$  and  $AV_{SS}$  are the positive and negative high voltage power supplies,  $AV_{CC}$  is the analog supply for the low voltage DAC circuitry, and a  $V_{LOGIC}$  supply pin sets the logic levels for the digital interface pins.

The ACE software provides an intuitive graphic user interface (GUI), allowing all of the **AD5767** modes of operation to be configured over the synchronous serial port (SPORT) interface. The ACE software also has plugin modules for many other Analog Devices evaluation boards and Circuits from the Lab® (CFTL) demo boards.

Complete specifications for the **AD5767** are available in the **AD5767** data sheet, which must be consulted in conjunction with this user guide when using this evaluation board.

## EVALUATION BOARD HARDWARE

### POWER SUPPLIES/DEFAULT LINK OPTIONS

Table 1. Quick Start Jumper Configurations for Both ADP5071 and Bench Supply

Link No.	ADP5071	Bench Supply
LK1	A	A
LK2	A	A
LK3	A	A
LK4	B	A
LK5	B	A
LK7	A	A
LK8	Inserted	Removed
LK11	Removed	Removed
LK12	Removed	Removed

The EVAL-AD5767SD2Z evaluation board can be powered using the on-board ADP5071, which is supplied with a 3.3 V supply via the J12 connector. Alternatively, the J9 connector can provide power to the board instead of the ADP5071 and is intended for use with well regulated bench supplies. See Figure 2 for a functional block diagram.

With either option, first set the link options on the evaluation board for the required operating setup before supplying the board.

Each supply is decoupled to the relevant ground plane with 10 μF and 0.1 μF capacitors. Each device supply pin is again decoupled with a 10 μF and 0.1 μF capacitor pair to the relevant ground plane.

The analog and digital planes are connected at one location close to the DAC. To avoid ground loop problems, do not connect AGND and DGND elsewhere in the system.

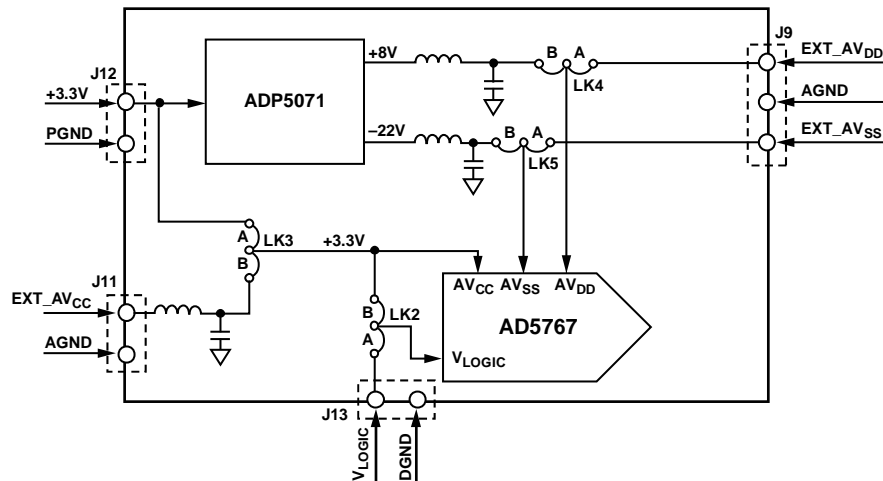

Figure 2. Powering the EVAL-AD5767 SDZ Evaluation Board

Table 2. Quick Start

Board Supply	Compatible Output Voltage Ranges (V)	Power Supplies Required		
		AVSS (J9) Maximum (V)	AVDD (J9) Minimum	J12 Nominal (V)
ADP5071	-20 to 0	Not required	Not required	3.3
	-16 to 0	Not required	Not required	3.3
	-10 to 0	Not required	Not required	3.3
	-10 to +6	Not required	Not required	3.3
	-5 to +5	Not required	Not required	3.3
Bench Supply	-20 to 0	-22	2.97	3.3
	-16 to +0	-18	2.97	3.3
	-10 to +0	-12	2.97	3.3
	-10 to +6	-12	8	3.3
	-12 to +14	-14	16	3.3
	-16 to +10	-18	12	3.3
	-5 to +5	-7	7	3.3
	-10 to +10	-12	12	3.3

**Power Solution Option (ADP5071)**

The EVAL-AD5767SD2Z board is populated with an ADP5071 switching regulator. This regulator generates +8 V and –22 V supplies from a single +3.3 V supply. The circuit was designed using the Analog Devices ADIsimPower toolset, which selects the components and generates the schematic and bill of materials, and displays the performance specifications. Visit the ADP5071 product page at [www.analog.com/ADP5071](http://www.analog.com/ADP5071) to download the design tools.

The ADP5071 requires 3.3 V for correct operation. Following the jumper configuration in Table 1, tie  $AV_{CC}$ ,  $V_{LOGIC}$ , and the ADP5071 supplies together to operate from a single 3.3 V supply.

Alternatively, the  $AV_{CC}$  header (J11) and  $V_{LOGIC}$  header (J13) can be powered with separate supplies by selecting Position B on LK3 and LK2, respectively. Refer to Table 3 for full link options.

The –12 V to +14 V, –16 V to +10 V, or –10 V to +10 V output voltage ranges are not available with the ADP5071 default configuration because a minimum of 2 V headroom is required. Refer to the Filtered 3.3 V Supply section for further information, or supply the board using a bench supply.

**Bench Power Supply Option**

The evaluation board can be powered using a bench supply to access all output voltage ranges of the AD5767. A headroom and footroom of at least 2 V is required. Refer to Table 2 for the supply requirements. It is important that the voltage across  $AV_{DD}$  to  $AV_{SS}$  does not exceed the absolute maximum rating of 34 V. Otherwise, device reliability may be affected.

Following the jumper configuration in Table 2, tie  $AV_{CC}$  and  $V_{LOGIC}$  together to operate from the same 3.3 V supply, or  $AV_{CC}$  (via J11) and  $V_{LOGIC}$  (via J13) can be powered with separate supplies by selecting Position B on LK3 and LK2, respectively. Refer to Table 3 for full link options. Refer to Table 3 for full link options.

**Table 3. Link Options**

Link No.	Description
LK1	Selects the power supply for the ADR4525 reference; requires a minimum of 3 V for correct operation Position A: supplied by the 3.3 V supply (J12) Position B: supplied by the $AV_{CC}$ header (J11)
LK2	Selects the power supply for the DAC $V_{LOGIC}$ pin; requires 1.7 V to 5.5 V for correct operation Position A: supplied by the 3.3 V supply (J12) Position B: supplied by the $V_{LOGIC}$ header (J13)
LK3	Selects the power supply for the DAC $AV_{CC}$ pin; requires 2.97 V to 5.5 V for correct operation Position A: supplied by the 3.3 V supply (J12) Position B: supplied by the $AV_{CC}$ header (J11)
LK4	Selects the power supply for the DAC $AV_{DD}$ pin; ensure that the voltage between $AV_{DD}$ and $AV_{SS}$ does not exceed 34 V Position A: supplied by the $AV_{DD}$ header (J9) Position B: supplied by the ADP5071 power solution
LK5	Selects the power supply for DAC $AV_{SS}$ pin; ensure that the voltage between $AV_{DD}$ and $AV_{SS}$ does not exceed 34 V Position A: supplied by $AV_{SS}$ header (J9) Position B: supplied by the ADP5071 power solution
LK6	Selects the start-up sequence of the ADP5071 outputs Position A: positive and negative output rails are sequenced based on the state of the EN1 and EN2 pins Position B: positive and negative output rails power up simultaneously when EN2 is high No link inserted: manual enable mode
LK7	Selects the voltage reference source Position A: selects the ADR4525 2.5 V reference Position B: selects an external reference source that can applied at the EXT_VREF SMB connector
LK8	Insert link to connect the ADP5071 to the 3.3 V supply header (J12)
LK9	Selects the switching frequency of ADP5071; this link is replaced with a 0 $\Omega$ resistor to Position A Position A: 1.2 MHz switching frequency (default) Position B: 2.4 MHz switching frequency
LK10	Selects the slew rate of the ADP5071 output; this link is replaced with a 0 $\Omega$ resistor to Position A Position A: slowest slew rate (best noise performance) Position B: normal slew rate
LK11	Insert link to bypass the LC filter on the ADP5071 positive output
LK12	Insert link to bypass the LC filter on the ADP5071 negative output

**PMOD Connector (J10) Pin Configuration and Descriptions**

Figure 3. Jumper J10 Pin Configuration

**Table 4. Connector J10 Pin Descriptions**

Pin No.	Description
1	SYNC
2	SDIN/MOSI
3	SDO/MISO
4	SCLK
5	DGND
6	V <sub>LOGIC</sub>
7	NC <sup>1</sup>
8	RESET
9	NC <sup>1</sup>
10	NC <sup>1</sup>
11	DGND
12	V <sub>LOGIC</sub>

<sup>1</sup> NC means no connection.

**ON-BOARD CONNECTORS**

There are eight connectors on the EVAL-AD5767SD2Z, as shown in Figure 3. For the external supply pins, refer to the Power Supplies/Default Link Options section because AV<sub>CC</sub> and V<sub>LOGIC</sub> can be powered using J12, depending on the jumper configuration.

**Table 5. On-Board Connectors**

Connector	Function
J1	Connection for the EVAL-SDP-CB1Z board
J2	Header pins for V <sub>OUT0</sub> to V <sub>OUT7</sub> and AGND
J3	Header pins for V <sub>OUT8</sub> to V <sub>OUT15</sub> and AGND
J9	Supplies AV <sub>DD</sub> and AV <sub>SS</sub> externally
J10	Peripheral module (PMOD) connection pins
J11	Supplies AV <sub>CC</sub> pin externally
J12	3.3 V supply for AV <sub>CC</sub> , V <sub>LOGIC</sub> , and the ADP5071
J13	Supplies V <sub>LOGIC</sub> pin externally

**ADP5071 SWITCHING REGULATOR**

**Filtering the ADP5071 Outputs**

The EVAL-AD5767SD2Z board has an LC filter fitted on the ADP5071 positive and negative outputs. The filter can be bypassed by inserting LK11 and LK12.

Figure 4 shows the output frequency spectrum of the AD5767 powered by the filtered ADP5071 supply. The dotted red line represents 10% of 1 LSB using the -10 V to +6 V range. For comparison, Figure 5 shows the output frequency spectrum of the AD5767 powered by a bench power supply.

Figure 4. Output of AD5767 with ADP5071 (LC Filtered)

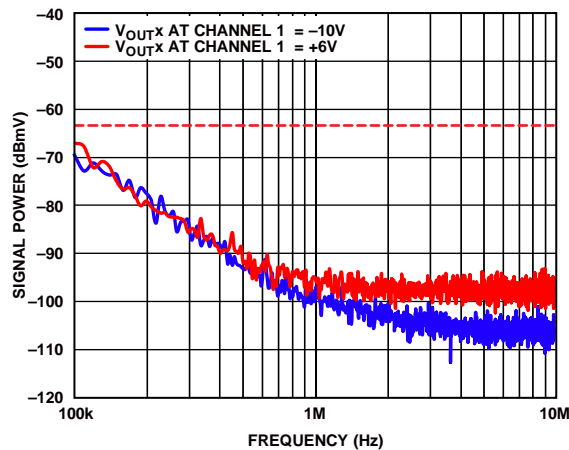

Figure 5. Output of AD5767 with Bench Power Supply

### Filtered 3.3 V Supply

The EVAL-AD5767SD2Z board contains a filter on J11 to allow users to filter the AD5767 AV<sub>CC</sub> rail. Alternatively, users can bypass the filter by using J12. Powering the board via the J12 header allows users to evaluate the board performance with their own supply. See Figure 6 for the functional block diagram.

When enabled with LK8, the ADP5071 can feed noise back onto the 3.3 V rail. Users can attenuate this noise by connecting J12 and J11 externally.

### Changing the ADP5071 Output Voltages

By default, the ADP5071 output voltages are +8 V and -22 V. To provide enough headroom to supply the -12 V to +14 V, -16 V to +10 V, and -10 V to +10 V ranges, the feedback resistors must be changed. These are R26 and R31 for the positive output, and R28 and R30 for the negative output. Based on the output supplies required and load current requirements, the Analog Devices ADIsimPower toolset selects the recommended feedback resistors for the application. ADIsimPower is available on the ADP5071 product page at [www.analog.com/ADP5071](http://www.analog.com/ADP5071).

It is important that the voltage across AV<sub>DD</sub> to AV<sub>SS</sub> does not exceed the absolute maximum rating of 34 V. Otherwise, device reliability may be affected.

Figure 6. AV<sub>CC</sub> Selection

## EVALUATION BOARD SOFTWARE

### ACE SOFTWARE INSTALLATION

The ACE software enables configuration of the [AD5767](#) over a USB port. This section introduces the key features of the program.

To download the ACE software and obtain detailed documentation on the platform, visit [www.analog.com/ace](http://www.analog.com/ace). The installer also includes the drivers for the SDP board and plugins for multiple Analog Devices evaluation boards, including the [EVAL-AD5767SD2Z](#).

After the ACE software is installed, connect the evaluation board and SDP controller board together and plug the USB cable from the PC to the SDP controller board. Allow a few moments for the Windows operating system to recognize the SDP board.

### ACE SOFTWARE OPERATION

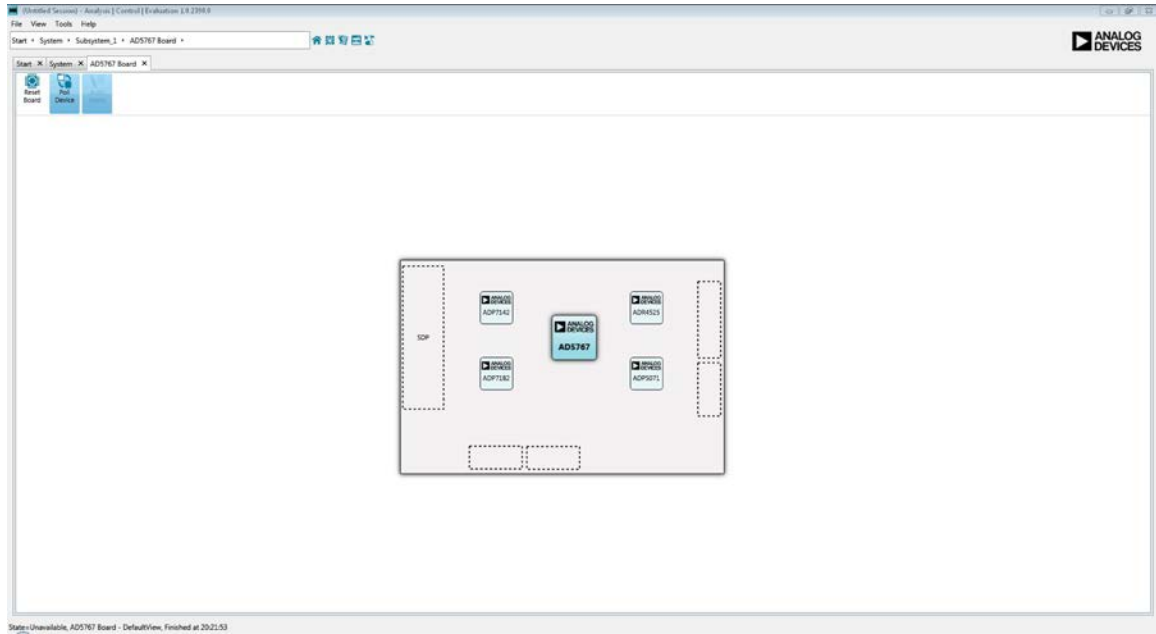

To operate the ACE software, follow these steps:

1. To launch the ACE software, click **Start > All Programs > Analog Devices > ACE**. The software opens in the **Start** view tab and recognizes the [EVAL-AD5767SD2Z](#) (see Figure 7).
2. Double click the **AD5767 Board** icon under **Attached Hardware** to open the **AD5767 Board** tab (see Figure 8).
3. Double click the **AD5767** chip shown in Figure 8 to open the **AD5767** tab (see Figure 9). This tab displays the block diagram and allows the user to configure the DAC input registers and control registers. The hardware registers on the [AD5767](#) are not altered until the **Apply Changes** button is clicked.
4. Click the **Proceed to Memory Map** button (Label 12 in Figure 11) to open the **AD5767 Memory Map** tab and allow access to all registers (see Figure 10). The hardware registers on the [AD5767](#) are not altered until the **Apply Changes** button is clicked.

For a detailed description of all GUI options, see Table 6 and Figure 11.

Figure 10. AD5767 Memory Map Tab

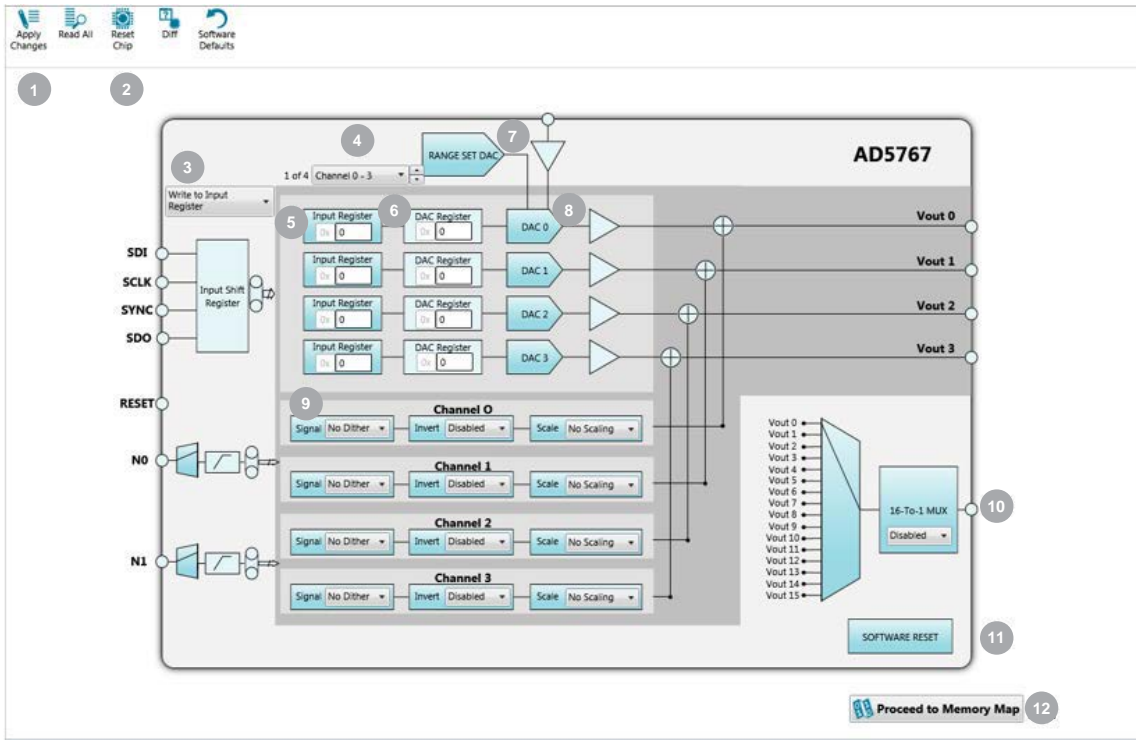

Figure 11. Main Window

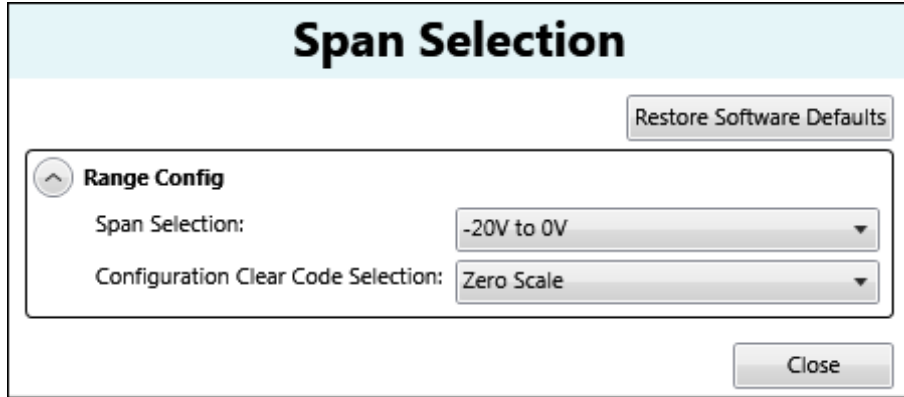

Figure 12. *Span Selection* Window

Table 6. GUI Options (See Figure 11)

Label No.	GUI Element	Description
1	<b>Apply Changes</b>	This button must be clicked to submit any changes on the GUI to the evaluation board hardware.
2	<b>Reset Chip</b>	Issues a hardware reset and reverts the software and hardware registers to their default settings.
3	<b>Write to Input Register</b>	Allows the user to write to the input register, write to the input register and the DAC register, or write to the input register and update all DAC registers.
4	Select output	Channels displayed. Allows the user to show Channel 0 to Channel 3, Channel 4 to Channel 7, Channel 8 to Channel 11, or Channel 12 to Channel 15 for $V_{OUT}$ in the <b>AD5767</b> chip tab.
5	<b>Input Register</b>	The user can input data to write to the input register. There is one input register per channel.
6	<b>DAC Register</b>	This is a graphical representation of the DAC register. There is one DAC register per channel.
7	<b>RANGE SET DAC</b>	Click <b>RANGE SET DAC</b> to select the output voltage range from the <b>Span Selection</b> window (see Figure 12).
8	<b>DAC x</b>	Click the DAC to apply a dither signal or to power down the selected channel.
9	<b>Signal, Invert, and Scale</b>	Allows the user to select the dither options for each channel.
10	<b>16-To-1 MUX</b>	Select which channel to route to the <b>AD5767</b> MUX_OUT pin.
11	<b>SOFTWARE RESET</b>	Issues a software reset and reverts the software and hardware registers to their default settings.
12	<b>Proceed to Memory Map</b>	Click to open the <b>AD5767 Memory Map</b> tab (see Figure 10).

## NOTES

### ESD Caution

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

### Legal Terms and Conditions

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
