### GENERAL DESCRIPTION

The ADP124RHZ-REDYKIT™ and ADP124CPZ-REDYKIT allow simplified prototyping and evaluation and is available for several standard fixed output voltage options in the ADP124 product family. The kits allow the user to evaluate the voltage options with two easy to order kits.

All surface-mount ADP124 parts are sorted and stored in the kits with the Analog Devices, Inc., part number and fixed output voltage clearly printed on each zip-top bag.

The kits can be used in the engineering lab to evaluate different voltage options. If other voltage options must be evaluated, a different part from the kits can be easily soldered onto one of the evaluation boards supplied with each kit.

The ADP124RHZ-REDYKIT is available with a fixed 3.3 V output voltage evaluation board. The ADP124CPZ-REDYKIT is available with a fixed 3.3 V output voltage evaluation board. The kits also contain additional parts for prototyping.

The kit enclosure, which contains individually packaged parts and the evaluation board, is packaged in an ESD foam pad inside a treated cardboard box that measures 8.7" (L) × 7.9" (W) × 1.75" (H), that is, 22 cm (L) × 20 cm (W) × 4.5 cm (H).

The user guide for the ADP124 evaluation boards is the [UG-056](#).
